Abstract (en)

A resistance welding device, particularly for welding portions of a motor vehicle body, comprises a robotized moving apparatus (12) provided with a movable arm (14) which supports a welding tool (18) intended to carry out projection weldings at a plurality of zones of a piece (20; 30). The welding tool (18) includes a body from which a welding C-shaped unit (24) extends, provided with a pair of opposite and aligned welding electrodes (26, 27), which body contains a transformer for feeding current to said welding electrodes (26, 27). The device (11) comprises a resting structure (32) provided with support members (40) for supporting a composite panel (30), reference means (42, 46) for correctly positioning the elements (30a, 30b) of the panel (30) during the welding, and at least a earth electrode (48) which is movable for closing, through the panel (30), the circuit for feeding current to the welding electrodes (26, 27).
