Abstract (en)

[origin: EP1878632A1] The passage (1) has bellows (10) or a bellows part, a passage bridge (20), and arms (40, 50) extending parallel to a bellows longitudinal axis. Each arm has one end that is attached to a body of respective vehicles (2, 3) e.g. railroad car, and other end hold that holds the bellows in a horizontal direction. A bearing support arranged at the body is provided for flexible accommodation of the arms, where the support has a circulating shell made of flexible material. The shell has an eyelet for the accommodation of a horizontal running axle that is fastened to the eyelet.
