Abstract (en)

The invention is a lid (1) for open containers (R), comprising a shaped body (2) made of a thin sheet of plastic material, provided with a peripheral groove (3) suited to be sealingly coupled with an edge (B) that delimits the mouth of the open container (R), and with a hollow area (4) created in its inner surface (1a), facing towards the inside of said open container (R) and closed with a breakable film (5). In this way a chamber (6) is defined for containing a substance (S) to be added to the contents of said open container (R). On the inner surface (4a) of the hollow area (4) there is a projection (7) directed towards the breakable film (5) and suited to break it when pressure is exerted onto the lid.
