Abstract (en)
[origin: EP1878852A2] The shutter has a step (1) mounted to a lower edge of an infrastructure (2) of the shutter by its end in a pivotable manner. The step is connected to lower level of a scale (3) by its another end for accessing a circulation platform. The fixation of the former end of the step on the infrastructure is carried out by a detachable articulation unit (4) i.e. pin, in a predetermined position. The articulation unit cooperates with a landing (5) for maintaining and pivoting the step in service position and locking the step in non utilization position.
