Abstract (en)

[origin: EP1878884A2] The device has oil collecting housing (7) with a plane housing section and another housing section (13) of different constructional space depth and arranged under a crank case. An oil pump (17) is provided for suction of oil from the sections, from which an oil suction line (21) is guided to the sections. An insertion part consists of a separation wall (19a, 19b) that separates the sections, where the line that is guided to the plane housing section is designed as a single piece with the insertion part. The plane housing section has a recess for holding the line.
