Abstract (en)

[origin: EP1878967A1] The support (400) has maintenance zones to maintain a light source by stabilizing pins (203A, 203B) in an operating position. Each zone has a maintenance blade extending outside a plane of the support along a direction opposite to an insertion direction of a socket (201) of a light source (200). Maintenance pins connect circumference of the support to the blades. The zones have insertion bosses forming lower extension of the blades, where the bosses extend outside the plane of the support along the direction identical to the insertion direction.
