Abstract (en)

[origin: EP1879153A2] The method involves contactlessly detecting and registering identification data of a vehicle during a stay of the vehicle in a workshop region. A request instruction is sent from a workshop management system to the vehicle for detecting and determining operation, service and diagnostic data. The detected operation, service and diagnostic data of the vehicle are transferred and evaluated for the workshop-management-system. The identification data and operation, service and diagnostic data are compared with data stored in a data base (6). An independent claim is also included for a device for detecting and determining service and diagnostic data of a vehicle at a workshop- management-system.
