Abstract (en)

A cell electrode of the present invention has a current collector (11) and an active material layer (13) formed on the current collector (11). The active material layer (13) contains: an active material in which a mean particle diameter is more than 1 µm to 5 µm or less and a BET specific surface area is 1 to 5 m²/g; and a conductive material of which content is 3 to 50 mass% with respect to 100 mass% of the active material.
