Abstract (en)

To advance the start of processing on a title of music and an artist's name that are sent in a Radiotext in a mobile type FM radio 10 complying with the RSD. Information of a content type (for example, a title of music), a start marker (location of start character) and a length marker (the number of characters) is obtained from the group 11A. When a group 2A in which the Radiotext is written is received (YES at S51), the character number of a character in the currently received group 2A (the number from the head character in the Radiotext) is calculated (S52) and the character is recorded in the RAM (S53). If the character number is the number of the last character of the title of the music or more, it is determined that the title of the music has been received (YES at S54) and the title of the music is determined (S55).
