Abstract (en)

[origin: WO2006119788A1] The invention describes a method for operating a motor vehicle with a large number of function systems (10), in which a set of profile specifications (14, 16) is stored in a storage means (4, 7, 9) of the motor vehicle, and the at least one function system (10) is configured in accordance with this set of profile specifications. According to the invention, one set of control specifications (14) is stored in a storage means (4) of the motor vehicle. The set of profile specifications (16) is supplied to a control evaluation device (11) as input data, with the control evaluation device (11) evaluating the profile specifications (16) with reference to the set of control specifications (14). The at least one function system (10) is configured on the basis of the result of the evaluation.
