Abstract (en)
[origin: FR2884806A1] The device has a fixing ring (1) with a fixation unit (12) in the shape of a continuous locking cord passing by forcibly fitting on a neck of a container. A covering hoop (2) is axially engaged from the top to the bottom around the ring and comprises a shoulder forming a gripping unit which cooperates with a stop unit formed of the hoop, where the stop unit is formed by the lower end of a skirt (11). The gripping unit and the stop unit define an axial retention unit for locking the hoop on the ring in distinct, separated axial positions.
