Abstract (en)
[origin: WO2006110995A1] This invention relates to a pump and container apparatus having a pump. The container apparatus has a container housing and a foot pump means for pumping liquid connected to the container housing. The container housing has a storage chamber for storing liquid and an opening through which liquid is added into the storage chamber. The foot pump means has a chamber wall defining a pump chamber with an pump chamber entrance opening and a pump chamber exit opening. The container housing has an exit opening in fluid communication with the pump chamber entrance opening to permit liquid in the storage chamber to be drawn and pumped into the pump chamber through the pump chamber entrance opening and out of the pump chamber through the pump chamber exit opening by operation of the foot pump means. There is a valve means comprising a one-way check valve mounted between the storage chamber and the pump chamber to permit operation of the foot pump means when the storage chamber is under atmospheric pressure, there being an air means to permit the drawing of air into the storage chamber as liquid is being pumped out of the storage chamber by use of the foot pump means.
