Abstract (en)
[origin: WO2006117040A1] The invention proposes connecting the workstation computers (22) of the workstations (20) of the textile machine producing cross-wound bobbins to separate functional groups (26a, 26b, 26c, 26d, 26e) of the respective workstation (20) in each case by means of a workstation fieldbus (23). This produces a high degree of flexibility, which allows later adaptation of the workstation (20) with little effort.
