Abstract (en)
[origin: WO2006120130A1] The invention relates to a sniffer leak detector comprising a sniffer probe (15), a suction device (20) and a gas detector (23). A switch (17) that is activated by the operator initiates a measuring operation. The switch begins a timed measurement and after a predetermined measuring time an alarm signal is generated by a signalling device (31). The sniffer leak detector permits the operator to conduct measurements from measuring point (MP) to measuring point, the measurement time being predetermined and the adherence to said time being monitored.
