Abstract (en)
[origin: WO2006119799A1] The invention relates to a starter transformer for a discharge lamp, comprising an open non-linear core. On use of said starter transformer with a non-linear magnetic core in a lamp socket for a discharge lamp a higher degree of flexibility in the configuration of the electrical properties of the starter transformer can be achieved with given geometry of the lamp socket, as, for example, a larger winding volume can be achieved than with a conventional straight starter transformer.
