Abstract (en)  
[origin: EP1880770A2] A device is provided for holding and actuating a can (50). The can includes a neck (52), a rim (53) formed on the neck (52), a push-button valve (54) and a nozzle (51) installed on the push-button valve (54). The device includes a body (10), a holder (13,60) and a trigger (20). The body (10) includes a handle (12) and a connective portion (14) extended from the handle (12). The holder (13,60) is arranged on the connective portion (14) of the body (10) and formed with two jaws (134,62) for clipping the neck of the can (50) and for supporting the rim (53) of the can (50). The trigger (20) is installed on the handle (12) and formed with a first end (21) to be operated by a user's finger and a second end (22) inserted into the holder for contact with the push-button valve (54) of the can (50).
