Abstract (en)  
[origin: EP1880845A2] A printing machine (1) has a first series of printing mechanisms (7a-7d), arranged one behind the other for printing the first side of the paper, and a turning/inverting device (4) and a following second row of similar print mechanisms. The lacquering mechanisms or their lacquering cylinders are arranged so that the front-faces and back-faces of the through-running paper sheets are lacquered, and in which a further inverting device is made available between the lacquering mechanisms. An independent claim is included for a method for double-sided multi-color paper-printing.
