Abstract (en)

Foldable container for transporting and/or storing goods, of the type comprising a rigid base structure (1) and a container element (2) which contains the goods. Container element (2) is made up of a foldable bag (3), made from a foldable laminar material, which at its bottom end is closely joined to rigid base structure (1), so that the latter defines, either directly or through the laminar material being embedded forming the bag (3), a rigid base (4) intended to directly support the goods contained in bag (3). Thanks to its foldable material condition, when bag (3) is empty it is suitable for adopting a completely refolded position on said rigid structure (1) and at least one upright position wherein it has at least one loading mouth (5) that opens directly for introducing goods.
