Abstract (en)  
[origin: EP1881142A2] The hinge has a connecting shaft (5, 6) arranged in the upper and lower hinge parts (1, 2) and protruding in an opening (4) of a middle hinge part (3), which lies on the connecting shaft by the axial bearing. The hinge part (3) is found in a distance outside the hinge part (1) and lies in a distance below the hinge part (2). Distance of the hinge part (3) from the hinge parts (1, 2) are changeable by axial displacement of the shaft into the hinge part (1), where height of a door connected with the hinge part (3) is adjustable in the mounted condition of the hinge in a certain area.
