Abstract (en)

[origin: EP1881205A1] The method involves operating multiple manifold valves (2) by input stage (7), on which a fluid operating pressure rests. A fluid admission of a main stage (6) is accomplished such that temporarily after fluid admission of input stage the operating pressure (13) supplying source rests only against the main stage. The input stage switches to main stage for switching pressure, which is developed against the input stage, and initial switching positions of the main stage determines electrical control signals. An independent claim is also included for a starting device for starting multiple arrangement of indirect electrically operated multiple manifold valve of an electro hydraulic system.
