Abstract (en)

[origin: EP1881269A1] The lamp has cover longitudinal edges (9, 10) pushable against detention strip surfaces (7, 8) for sealing-closure of a cover (3). The cover longitudinal edges have free side piece-ends (11, 12) that are bent and/or formed inwardly in such a manner that the free side piece-ends form a channel that is opened partially to inward pointing edges (13, 14) of the detention strip surfaces, where elastomeric sealing band (17, 18) is pressed into the channels. The band presses on inward bent, rounded edges (19, 20) of the detention strip surfaces in an installed condition of the cover.
