Abstract (en)

[origin: US2006257824A1] In the production of a dental prosthetic item, which dental prosthetic item comprises an at least single-membered framework, as a first component, which framework has an exterior surface to be faced by a veneer, veneering is carried out using a separately produced veneer shell, as a further component, which, optionally with the interposition of further components, has a mating surface for attachment thereof to said exterior surface of said framework and is attached to said framework. Furthermore, a dental prosthetic item produced by the aforementioned method, a component for such a dental prosthetic item, and a blank for the fabrication of such a dental prosthetic item are claimed.
