Abstract (en)
[origin: WO2006120051A1] The invention proceeds from an electric machine tool, in particular an electric hammer, having a drive (11) which is arranged in a housing (10), and a rammer (12) and a handle (13), comprising an eccentric (14) which is driven by the drive (11), the rammer (12) comprising movable parts (15, 16). It is proposed that at least two of the movable parts (15, 16) can be displaced in a separate guide cylinder (17) which is stationary with respect to the movable parts (15, 16) and the eccentric (14).
