Abstract (en)
[origin: WO2006076880A1] Conventionally, prams and the classic first child vehicles were independent devices. The disclosed transport frame permits the production and operation of the series of vehicles used by children of the western world: pram, pushchair, walking learning aid, three-wheeler, go-kart and additional corresponding trailer or hand carts as a modular system. Essential components of said transport frame are of multiple or universal application.
