Abstract (en)

[origin: FR2885590A1] The device has a connection set (7), to articulate a movable support (4) with respect to chassis fixations (5a, 5b) assembled on the lower part of a motorcycle chassis. The set has connecting rods (9a, 9b) respectively connected to the support through support pivot connections (10, 12). The rods (9a, 9b) are respectively connected to the fixations (5a, 5b) through chassis pivot connections (11, 13). The fixations (5a, 5b) are separated from each other by a separation distance (14) greater than the separation distance between the connections (10, 12). An independent claim is also included for a method of steering a motorcycle.
