Abstract (en)

[origin: FR2885612A1] The bottle has a removable water cooling circuit arranged with cool enclosure walls. A horizontal support plate (13) has two taps (8, 10) and a distribution part which permits connection between a finger (15) and a non cool water inlet compartment at inlet of the circuit. An empty opening (4) is arranged in the plate for passage of the circuit, where the opening is arranged between the compartment and a tube leading directly the non cool water to a tap delivering temperate water, and between an end of a water outlet end produced in the circuit and other tap delivering cold water.
