Abstract (en)
[origin: WO2006123062A2] The inventive connecting part comprises a base (2) fixable to a support and to a perforated plate (4) for fixing of a structure or another connecting part. Said plate (4) comprises a first perforation and at least one second perforation (12) in the form of a longitudinal optionally curved hole, which is oriented in such a way that it is substantially inclined with respect to the tangent of a circle whose center is the point of the first perforation and which passes by the point of the second perforation (12).
