Abstract (en)  
[origin: EP1882559A1] The device (2) has a working equipment (10) provided in a housing (4). A handle (14) is held at the housing by a decoupling arrangement (16). The decoupling arrangement exhibits a spring-mounted rotary bearing (20) that is provided at a distance from a working axis (A) with respect to a direction (y) than another spring-mounted rotary bearing (18), where the direction stays transverse to the working axis. The spring-mounted bearing (18) exhibits a small spring stiffness along the direction (y) than along the direction (z).
