Abstract (en)

[origin: EP1882562A1] The machine has multiple processing stations (2,2',2'') with a fixed tool, a deliverable tool and a transport device. The device transports a sheet through the individual processing stations. The deliverable tool is moved by a separate drive, actuated by a closed loop position, so that a lifting movement of the deliverable tool of the processing station is adjusted individually. The separate drives are hydraulic cylinders (16,16',16'') with a piston, which is mounted to the deliverable tool and the cylinder in a frame. A target value is determined for the movement of the tool.
