Abstract (en)

[origin: EP1882566A2] The machine has a sheet transportation system that consists of circumferential gripper carriages (8) with gripper bridges. Grippers are fastened at the gripper bridges, where sheets (6) are grippable with the grippers. The gripper bridges are driven by a linear drive at its outer end. The sheets are aligned, by the movement that is produced by a linear motor, in a sheet retaining position in a punching station (2) and a stripping station (3) in a circumferential direction and sloping position.
