Abstract (en)

[origin: EP1882666A1] A method of controlling access to an elevator car 5, in particular to its ceiling 7 and/or underside, comprises the steps of: switching the elevator control into a maintenance mode which controls the car 5 to travel to a predetermined stop position W1, W4 permitting access; and opening a landing door T1, T2, T3, T4 of the elevator shaft 1 the car 5 is running in. The elevator control is switched into said maintenance mode only if operating a landing call receiving means in a predetermined identification pattern which differs from a call pattern for calling the elevator.
