Abstract (en)

[origin: DE202006011637U1] The runner (1) has a locking element (7) that is fixed in the running direction and sprung from above to engage a stop (5) on the runner to block its movement. The blocking element is mounted under the rail (3) so as to be pivotable into the runner. A sprung deployable armature (11) of a lifting electromagnet is retractable into a release position and contacts the locking element.
