Abstract (en)

[origin: EP1882807A1] The device has moving parts (20, 30) for tensioning a release cable (11) according to actuation direction (Fa, Fa'), where the device is in the form of a release handle (1) held in one hand and has a notch shape. A locking unit locks the parts, and an unlocking unit (41a) unlocks the parts. The unlocking unit is actuated according to a direction substantially perpendicular to the actuation direction and acts on the locking unit on either side of the actuation direction. The locking unit blocks the degree of freedom between the parts, and the unlocking unit is disposed on one of the parts.
