Abstract (en)
[origin: WO2006125630A1] The invention relates to a drawer (24) which consists of base (6), a front panel (25), a rear wall (22) and two lateral bars which extend in the direction of displacement of the drawer (24). The aim of the invention is to increase the stability of the lateral bars, to prevent or at least reduce the risk of injury and to increase the user-friendliness of the drawer. According to the invention, at least one functional profile rod (7) is fixed to at least one lateral bar and/or the front panel (25) and/or the rear wall (22) by locking or by an adhesive layer in the upper area which is oriented away from the base (6). The functional profile rod (7) is embodied as an open stabilising hollow profile rod and has a C-shaped asymmetrical cross-section. The inventive drawer is particularly suitable for kitchen units.
