Abstract (en)
[origin: WO2006125785A1] The invention concerns a device for supporting a safety line, in particular for preventing accidental fall of personnel working in sites involving such a risk, comprising at least one elongated tubular element (1) for guiding the passage of the cable (2) of said safety line, said tubular element (1) being maintained by at least two spaced apart supports (3) designed to be fixed to a stationary surface, characterized in that said elongated tubular element (1) is made of flexible plastic material, such that it can match the shape of a bend to be provided.
