Abstract (en)  
[origin: WO2006122856A1] The invention relates to safety system for a vehicle, comprising at least one safety device (200) which detects and/or determines and evaluates one or more parameters of vehicle movement dynamics in order to activate at least one protective unit (230, 240). The invention is characterized in that a parameterization device (100) defines adjustments and/or applications and/or parameters for the safety device in response to user-related set values, thereby influencing the trigger behavior of the at least one protective unit (230, 240).
