Abstract (en)

[origin: WO2006125732A1] The invention relates to hydraulic/electronic regulators (1, 2) for an electronic brake regulation system. A hydraulic/electronic regulator for current ABS/ASR/ESP units essentially comprises a central hydraulic block (6) and an electronic regulator (1) containing control electronics on a control circuit board (4). The aim of the invention is the production of a simply-assembled electronic regulator device (1) and an economically-assembled electronic regulator (1, 2). Said aim is essentially achieved whereby the control circuit board (4) is assembled such as to be completely electrically insulated to the outside on at least one first side (28) and to have an essentially smooth surface. It is thus possible to use the hydraulic block (6) for cooling the control circuit board (4). Further advantageous embodiments of the invention are given in the subsequent claims.
