Abstract (en)
[origin: WO2006125764A1] The invention relates to an electric drive machine which consists of a stator and a rotor which together form a drive system which is associated with an energy transport system which is used for a specific reason. According to the invention, the electric windings of the drive system and the energy transport system are arranged in a common active part (50, 60). The drive function and the energy transport function are independent from each other.
