Abstract (en)

[origin: WO2006125486A1] The invention concerns a method for processing signals received (30) by a sound programme signal receiver including a step (42, 44) of adjusting at least one parameter for processing small audio signals obtained from the received signals. It further includes a prior step of dividing a space representing a quality of reception of sound programme signals into a plurality of reception zones wherein the sound programme signal receiver is likely to be located. The adjustment (42, 44) of the parameter for processing small audio signals is determined on the basis of one of the reception zones wherein the sound programme signal receiver is located.
