Abstract (en)
[origin: WO2006125521A1] The invention relates to a network comprised of sensor elements (7-12) in which the sensor element (7-12) are connected to one another and/or to a central unit (21) via interfaces. The sensor elements (7-12) are placed at different locations and each have at least one sensor, which detects biological or chemical harmful substances. Sensor elements (7-12) with sensors that detect different substances are arranged at different locations, and the sensor elements (7-12) transmit measured values detected by the sensors to one another and/or to the central unit (21).
