Abstract (en)
[origin: EP1884172A1] The apparatus has a case (1) held with hand, and including an upper part to receive a hair-removing roller (3) carrying tweezers. The case has a driving unit to drive the roller, and an electric motor drives a centrifugal fan to create an air flow between an air inlet opening (18) and an air outlet opening (19) of the case oriented towards skin. The inlet opening is located near a longitudinal side of the roller, and the outlet opening is located on an opposed side of the roller. The fan is placed beneath the roller, and has a volute partially formed by walls of the case.
