Abstract (en)

[origin: EP1884328A1] The cover (1) has a sliding guide and a locking device configured to hold the cover in a closed position, where the device has a handle (3) designed as a tilt-thrust piece (4) acting upon with a manual actuating force. The piece tilts around a tiltable axis (9) and forms an acute angle with a sliding direction of the guide, where the cover is made of plastic. The angle is located in front of the axis as viewed in a sliding-open direction. The piece has locking projections (7, 8) for engaging into a locking receptacle of a housing of a hand tool i.e. electrically-powered hand tool.
