Abstract (en)
An applicator head (6) for applying paint to an object surface, said applicator head comprising at least one fluid supply channel (50) and at least one nozzle (57) outlet for paint. The least one nozzle is arranged in groups or arrays (3), each with means for producing a pressure pulse in the paint so causing a small quantity of paint to be ejected from the at least one nozzle. The speed and timing of paint ejection may be controlled separately for each of the plurality of nozzles in the applicator head. For use with painting systems and automated or robotic painting systems for painting automobiles and the like.
