Abstract (en)

[origin: EP1884375A2] The method involves measuring a value of a sealing liquid in a tank of a humidifying equipment and carrying out qualitative analysis of the liquid based on the measured value and a material parameter. The amount of liquid stored in a humidifying medium is measured, and the liquid supply to the humidifying medium is dynamically controlled based on the material parameter and a value that is produced by the measurement of the amount of liquid. An independent claim is also included for an arrangement for controlling liquid supply to humidifying medium of a humidifying equipment.
