Abstract (en)

[origin: EP1884434A1] The hinge (1) has an energy compensation unit integrated in a hinge joint, which is formed with hinge arms (10, 20) and a hinge bearing. The energy compensation unit has a fixable longitudinal stroke that maximally arises during energy compensation, where the stroke defines maximum longitudinal displacement of two base plates (2, 4) relative to each other. An impact unit (40) is arranged in a frontal end section (12) of the hinge arm (10), and includes an impact surface that faces the base plate (4).
