Abstract (en)

[origin: EP1884466A1] The system has a filling valve (24) adjacent to a flow measuring device (23) for filling masses in a cylindrical container (38). A control unit (15) receives measuring signals reproducing an actual value of the volume of the masses that flows through the measuring device. The control unit compares the actual value with a predefined target value of the volume of the filled mass. The control unit generates and outputs control signals to a filling-unit (22) for closing the filling valve.
