Abstract (en)

[origin: EP1884657A1] Fixing device (30) for fixing a fuel injector (18) in a cylinder head (14) of a combustion engine (22), comprising a tubular portion (32) including a central longitudinal axis (L), the tubular portion (32) being designed to engage the fuel injector (18) and to be rigidly coupled to the fuel injector (18), and projections (36) being formed in one piece with the tubular portion (32) and being bent away to extend from the tubular portion (32) outwards in radial direction. The projections (36) are comprising at least two force receiving areas (38) and are arranged and designed to receive a retaining force (F) in the force receiving areas (38), the retaining force (F) acting in the direction of the central longitudinal axis (L) to retain the fuel injector (18) in the cylinder head (14), two of the force receiving areas (38) substantially opposing each other radially relative to the central longitudinal axis (L), and the projections (36) are formed to directly follow the tubular portion (32) in the direction of the retaining force (F).
