Abstract (en)
[origin: WO2006122879A1] The invention relates to a coffee machine with a brewing chamber (2), a device for filling the brewing chamber with coffee powder, and with a brewing device (3) in order to brew up the coffee powder in the brewing chamber (2) with hot water to produce the coffee extract. The coffee machine has a revolver mechanism (1) with a plurality of brewing chambers (2), a feeding station (SF), a brewing station (SB) and an emptying station (SE) which are arranged one behind another on the revolver mechanism (1) in such a manner that rotation of the revolver mechanism (1) enables the brewing chambers (2) to be transported in each case in a stepwise manner one after the other from the feeding station (SF) to the brewing station (SB) and on to the emptying station (SE).
