Abstract (en)
[origin: WO2006111536A1] The invention relates to a flexible suction hose for a vacuum cleaner with peripheral bellows waves (14) that form successive depressions (18) and elevations (20) in the direction of flow (24) on the inside (16) of the hose. In order to improve the flexible suction hose regarding the flow behavior thereof, at least one planar element (22, 30) which extends substantially in the circumferential direction and in the direction of flow (24) while at least partly covering the depressions (18) is disposed on the inside (16) of the hose.
