Abstract (en)
[origin: US2008283631A1] A shower head according to the invention comprises a rotor with a closing plate which bears against a jet disk with jet passage openings and, when the rotor is rotated, alternately opens and closes said jet passage openings. Pulsed massage jets are generated at the outlet of the jet passage openings as a result. A further jet outlet disk with jet out let openings is arranged downstream of said jet disk, with said jet outlet openings being aligned axially opposite the jet passage openings of the jet disk. Ventilation chambers are arranged between the two disks, said ventilation chambers being connected to the outside of the shower head. The pulsed jets are ventilated downstream of the jet passage openings as a result.
